In-house decoration doors

Application description

A simple door can be personalized for in-house decorative purposes. This can be directly sold to the end customer to create the baby-room of their dreams, but also architects (especially in-house architects) will be interested to use these possibilities to their extremes: wall-decoration, special light effects, floors, ceiling tiles, mirrors, furniture ... personalized objects to cherish for your life as well as plug-and-play flexibility.

Technology used

- Printed on :Anapura XL² - 12P
- Depending on the coating, "Extra Wide Gamut" configurations might be used on absorbent substrate. On varnished, coated or laminated surfaces, no extra ink is required, but the adhesion should be looked at carefully for every different material.
- Partial pre-white can be used on wood laminated or colored doors.
- On these basic and cheap doors, the Extra Wide Gamut configurations are used to ensure saturated colors are within reach.
- Color Profiles are made with ColorTune 5.0.

Production notes

- :Anapura XL² Printed BI-directional with 50% UV power.
- Door can be positioned landscape to have maximum production speed.
- Normal speed (1150), 10m²/hour.
- Material: Wood - MDF material.

Remarks

- Maximum height is 48 mm.
